

Perpetual Calendar

1582-2238

You can use this perpetual calendar to determine the day of week for any day between the years mentioned above. You can as well determine which days in these years have been a specific day of the week.

Usage:

Look up the year on one of the inner pages and remember the letter below it. Also remember whether this year is a leap year (printed in boldface) or not. Now look at the back page. Follow the lines from the month to the “Day of Week” field. When your month is January or February, use the LY column for leap years and the NY column for non-leap years.

Now follow the lines from the day of month – you will find the day of week where this line crosses the other one.
